The limited built-in configurability of Linux can lead to expensive code size overhead when it is used in the embedded market. To overcome this problem, we propose the application of link-time compaction and specialization techniques that exploit the *a priori* known, fixed run-time environment of many embedded systems. In experimental setups based on the

ARM XScale and i386 platforms, the proposed techniques are able to reduce the kernel memory footprint with over 16%. We also show how rel ...

This paper presents the design and an evaluation of Mondrix, a version of the Linux kernel with Mondriaan Memory Protection (MMP). MMP is a combination of hardware and software that provides efficient fine-grained memory protection between multiple protection domains sharing a linear address space. Mondrix uses MMP to enforce isolation between kernel modules which helps detect bugs, limits their damage, and improves kernel robustness and maintainability. During development, MMP exposed two kerne ...

18 Device driver programming in a transactional DSM operating system

T. Bindhammer, R. Göckelmann, O. Marquardt, M. Schöttner, M. Wende, P. Schulthess

January 2002 **Australian Computer Science Communications , Proceedings of the seventh Asia-Pacific conference on Computer systems architecture - Volume 6 CRPITS '02**, Volume 24 Issue 3

Publisher: Australian Computer Society, Inc. , IEEE Computer Society Press

Full text available:  [pdf\(750.85 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

The Plurix project implements an object-oriented operating system (OS) for PC clusters. Network communication is implemented via the distributed shared memory (DSM) paradigm. Memory consistency is maintained by restartable transactions and an optimistic synchronization scheme, that have been used in database technology in the past. Originally, DSM systems were built to support parallel algorithms, but using DSM as a foundation for a general purpose OS offers interesting perspectives in designing ...

Keywords: distributed shared memory, driver development, operating system, optimistic concurrency control
